

## Gondola Riding Car

**The Great American Train Company is proud to present its new Gondola Riding Car.**

Gondola cars have been used since the late 1800's to haul coal, iron plates and other bulk materials. They have open tops but enclosed sides and ends. Like the ones operating in the early 1900's, our Gondola Riding Car has wooden sides with metal corners for rigidity and strength.

As an additional safety measure, the Gondola Riding Car is designed for use solely on The Great American Train Company's exclusive No-Tip™ Track System. No-Tip Track is highly recommended for backyard and commercial use to prevent riding cars from tipping while loaded with passengers.

**“Backyard trains are a great hobby for the entire family.”**

# Features

**Tough Steel Frame.** The steel frame provides a solid base for the authentically-styled wooden sides and ends.

**Durable Finishes.** Powder-coat painted steel frame and all-weather brown paint on wood sides, ends and seats.

**No-Tip Safety Feature.** An exclusive in the industry, this design captivates the riding car's trucks to the underside of the track's crown. Highly recommended for backyard and commercial applications.

Please note: the Gondola Riding Car is designed for use ONLY with the No-Tip Track System.

**Adjustable Seats.** Two removable adult seats with child seats below. Child seats fitted with adjustable seat belts.

**Made in the USA.** The Gondola Riding Car is manufactured at The Great American Train Company in Plymouth, Minnesota, USA.
